

ASSIGNMENT #2

Advanced CSS: Flexbox and Grid

Compliance audit and implementation report

Team	EMEMDANCE
Project	Web Development Guide
Group	SE-2514
Members	Pribylyov Yegor; Nurdaulet Zhanybek; Yelnur Yessenali
CSS contribution	Yelnur Yessenali - CSS Basics and CSS Layout pages
Repository	https://github.com/e1noor/front_end
Deployed website	Not available - GitHub Pages returned HTTP 404
Audit date	20 September 2026

Audit outcome

All five technical CSS criteria are implemented and verified. The report criterion is covered by this document. Defense remains pending. The project is not fully submission-ready because deployment is missing and one image referenced by the HTML Basics page does not exist.

1. Executive Compliance Audit

The repository was checked against every instruction, submission rule, task, final-result requirement, publishing step, and scoring criterion in Frontend Assignment 2.pdf. Browser checks were run at 1440px and 390px widths on all six HTML pages.

Evaluation criterion	Weight	Evidence	Result
Flexbox Navigation	10%	Logo and links use Flexbox; centered with a 10px gap.	PASS
Flexbox Cards	10%	3 cards; measured heights: 327px, 327px, 327px; hover enabled.	PASS
Grid Layout	10%	Named header, sidebar, main, and footer areas; responsive area change.	PASS
Image Gallery	10%	9 local images; 3 x 260px columns; caption moves from -55px to 0px.	PASS
UX and Engagement	10%	Consistent spacing, active navigation, hover effects, no horizontal overflow.	PASS
Defense	40%	Must be demonstrated during the practice lesson.	PENDING
Report	10%	Objective, steps, screenshots, audit table, and reflection are included.	PASS

Verified score: 60 / 100

The 50 technical points and 10 report points are supported by evidence. The remaining 40 points can only be earned during live defense. This is not a predicted final grade.

Submission blockers

Blocker	Evidence	Required action	Status
No deployed website	GitHub Pages root and both CSS page URLs returned HTTP 404.	Enable GitHub Pages from the main branch and copy the working URL.	FAIL
Missing local image	1-index.html references images/html-structure.png, but the file is absent.	Add the image or change/remove the broken img reference.	FAIL
ZIP package not checked	The assignment requires a project-folder ZIP.	Create the ZIP only after the broken image and deployment are fixed.	PARTIAL
All members must submit	Individual LMS submissions cannot be verified from the repository.	Each team member must upload the PDF, ZIP, and URL before the deadline.	NOT VERIFIED

2. Requirement Traceability Table

Assignment requirement	Repository evidence	Status
Team work	Three members and their page responsibilities are listed in the project.	PASS
Add Flexbox to the Assignment 1 CSS pages	Both 3-css-basics.html and 4-css-layout.html have Flexbox headers and navigation.	PASS
Task 1: logo left, links right	site-brand and main-nav are direct children of site-header.	PASS
Task 1: horizontal alignment and spacing	display:flex; align-items:center; justify-content:space-between; gap:10px.	PASS
Task 2: at least 3 cards	Three topic-card articles, each with image, title, text, and button.	PASS
Task 2: row, equal height, gap, hover	card-row is Flexbox; align-items:stretch; 18px gap; lift and shadow on hover.	PASS
Task 3: header, sidebar, main, footer	body uses named grid-template-areas for all four regions.	PASS
Task 3: rows, columns, logical placement	Desktop columns are 220px and 900px; header/footer span both columns.	PASS
Task 4: at least 9 images	Nine unique local SVG assets are present and load successfully.	PASS
Task 4: equal tracks and gaps	Gallery uses three 260px columns, 170px rows, and an 18px gap.	PASS
Task 4: hover caption overlay	Caption bottom changes from -55px to 0px on hover.	PASS
Final result: responsive combined layout	At 390px, body becomes one column and gallery becomes one 276px column.	PASS
Commit and push	main and origin/main point to commit 09f0f26; repository status is synchronized.	PASS
Re-deploy and provide URL	Repository exists, but GitHub Pages and CSS page URLs return HTTP 404.	FAIL
Project runs without errors	Five pages are clean; HTML Basics has a broken images/html-structure.png reference.	PARTIAL
Report includes deployed URL	No valid deployed URL exists yet; the report records this blocker.	FAIL
All members submit before LMS deadline	External LMS action and deadline compliance cannot be verified locally.	NOT VERIFIED

3. Part 1 - Flexbox

Task 1. Navigation Bar

Implementation steps: (1) a semantic header contains the project brand and navigation; (2) the header is changed into a Flexbox container; (3) justify-content places the logo and links at opposite sides; (4) align-items vertically centers them; (5) the navigation list is also a Flexbox container with a 10px gap; (6) media queries stack the header on smaller screens.

Figure 1. Flexbox header with the CSS logo on the left and navigation links on the right.

Task 2. Card Row

Implementation steps: (1) three article elements were created; (2) each card received a local image, heading, description, and button; (3) card-row uses display:flex, wrapping, an 18px gap, and stretch alignment; (4) each card uses a column Flexbox layout; (5) margin-top:auto keeps each button at the bottom; (6) hover lifts the card by 6px and increases its shadow.

Figure 2. Three equal-height cards. Browser measurement: 327px for every card.

4. Part 2 - Grid System

Task 3. Page Layout with Grid Areas

The body is the parent Grid container. Its desktop template defines a 220px sidebar and a 900px main column. Named areas place the header across the top, the sidebar on the left, main content on the right, and the footer across the bottom. At narrower breakpoints, the areas change to a single column in the order header, sidebar, main, footer.

Desktop grid-template-areas	Mobile grid-template-areas
"header header" "sidebar main" "footer footer"	"header" "sidebar" "main" "footer"

Figure 3. Desktop evidence: header at the top, sidebar at left, main content at right.

5. Task 4 - Image Gallery

Nine local SVG illustrations were created for CSS selectors, box model, colors, spacing, Flexbox, Grid, responsive design, hover, and code. The gallery is a Grid container with three equal 260px columns and 170px rows. Figures use position:relative and overflow:hidden. Captions are positioned at -55px and move to 0px on hover, producing the required overlay.

Check	Measured result	Status
Image count	9	PASS
Desktop columns	260px 260px 260px	PASS
Consistent gap	18px	PASS
Caption before hover	-55px	PASS
Caption after hover	0px	PASS

Figure 4. Three-by-three Grid gallery. The first caption is visible during hover.

6. Responsive and Project-Level Verification

Figure 5. Mobile viewport at 390px.

Automated browser results

All six pages returned HTTP 200 locally at both tested widths. No page had horizontal overflow: document scroll width equaled the viewport width. The two CSS pages had no console errors and no broken images. The only project-level failure was the missing HTML Basics image.

Page	Desktop	Mobile	Images
1-index.html	PASS	PASS	FAIL
2-html-advanced.html	PASS	PASS	PASS
3-css-basics.html	PASS	PASS	PASS
4-css-layout.html	PASS	PASS	PASS
5-js-basics.html	PASS	PASS	PASS
6-js-dom.html	PASS	PASS	PASS

Pixel-unit requirement

The Assignment 2 CSS block was scanned for %, em, rem, vw, vh, and fr length units. Result: 0 non-pixel length units.

7. Publishing, Submission, and Final Reflection

Publishing step	Evidence	Result
Commit changes	Latest commit: 09f0f26 - css had done.	PASS
Push shared repository	main and origin/main have 0 commits ahead and 0 behind.	PASS
Deploy website	GitHub Pages API and expected site URLs return HTTP 404.	FAIL
Submit URL	A valid deployed URL cannot be included until deployment is enabled.	FAIL
Submit PDF and ZIP	This PDF is ready; project ZIP must be created after blockers are fixed.	PARTIAL

Final reflection

The project demonstrates the intended combination of modern CSS layout methods. Flexbox is used for one-dimensional alignment in the header, navigation, cards, buttons, and internal components. Grid is used for the two-dimensional page structure and gallery. The implementation is readable, uses simple class names, keeps Assignment 2 dimensions in pixels, and responds correctly at desktop and mobile widths. The strongest evidence is the equal card height, named grid areas, nine-image gallery, working caption overlay, and absence of overflow on the CSS pages.

Before final LMS submission, the team must enable deployment, add the working URL to this report, resolve the missing HTML Basics image, create the final ZIP, and ensure that every team member submits before the deadline. Defense preparation is also essential because it represents 40% of the grade.

Defense preparation

The repository includes DEFENSE-GUIDE.md with theory summaries and live-coding examples for selectors, specificity, the box model, Flexbox axes and alignment, Grid terminology, hover effects, media queries, changing text color by ID, moving text to the right, and changing a round image into a square image.
